

Ali Ismoilov

Backend Developer (Node.js)

rustammuborakmuhammadali@gmail.com | +998 94 926 34 33 | linkedin.com/in/aliismoilov | github.com/muhammadaliismoilov | t.me/aliismoilov3433 | Khorezm, Uzbekistan

PROFILE

I am a Backend Developer specializing in building robust and scalable RESTful APIs using Node.js and TypeScript, with hands-on experience in SQL (PostgreSQL) and NoSQL (MongoDB) databases, efficient database schema design, clean and maintainable architecture, JWT-based authentication and Role-Based Access Control (RBAC), as well as integrating Telegram Bots and real-world backend systems; I have successfully delivered multiple backend projects, collaborated in team-based environments, mentored junior students, and continuously focus on clean code, efficient architecture, and learning to solve complex backend challenges, and I am currently open to internship or junior backend developer opportunities.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript
Runtime & Frameworks	Node.js, Express.js, NestJS
Databases	PostgreSQL, MongoDB, Redis
ORMs	TypeORM, Drizzle ORM, Sequelize, Mongoose
DevOps & Cloud	Docker, Docker Compose, Nginx, GitHub Actions, CI/CD, Linux / VPS, AWS (EC2), Vercel, Git & GitHub
Auth & API	JWT, REST API, Swagger, Postman, WebSocket
Other	Telegram Bot

PROFESSIONAL EXPERIENCE

Mentor — Digital Education Development Center (IT PARK)

October 2025 – May 2026 | Shovot, Khorezm Region, Uzbekistan

- Mentored school students in Backend development using Node.js
- Taught core backend technologies: JavaScript, TypeScript, Node.js, Express.js, NestJS
- Introduced students to REST API development and database fundamentals (MongoDB, PostgreSQL)
- Helped students understand complex backend concepts through practical examples
- Reviewed homework assignments and provided constructive code feedback

Backend Developer Intern — Megasoft | TOTMEGA LLC

August 2025 – November 2025

- Developed efficient and scalable RESTful APIs using Drizzle ORM and PostgreSQL
- Optimized SQL queries, improving database performance and request speed
- Designed and implemented CRUD operations
- Prepared API documentation using Swagger, improving collaboration between frontend and backend teams

Teacher Assistant — Najot Ta'lim (Khorezm branch)

June 2025 – August 2025

- Assisted instructors during backend development classes
- Supported students with Node.js, JavaScript, Express.js, and database basics
- Helped students debug code and understand backend logic
- Checked assignments and tracked students' learning progress

PROJECTS

Education Center CRM System

github.com/muhammadaliismoilov/education-crm-backend

Live Demo: crm-oquv-markaz.vercel.app

An education center management backend — live, fully functional, and deployed in production, with subdomain-based multi-branch routing. Automates monthly student billing via a distributed-lock, chunked cron job that prevents duplicate invoices across instances, and manages the full contract lifecycle — generation, approval, e-signing, and PDF export via Puppeteer. Features 4-tier RBAC (Superadmin, Admin, Manager, Teacher), Face-ID attendance tracking, financial reporting with Excel export, and an IP-whitelisted admin panel. Explore the live demo — Login: alishadmin, Password: alishadmin.

Tech Stack: Node.js, TypeScript, NestJS, PostgreSQL, TypeORM, Redis, Docker, JWT, Swagger

Market Automation System

github.com/muhammadaliismoilov/Market

A high-performance backend system designed for grocery store automation, focusing on inventory management and transaction integrity. The engine handles complex stock tracking, automated sales reporting, and profit-loss analysis. It utilizes Redis caching to optimize data retrieval speeds and is fully Dockerized for seamless deployment on VPS, ensuring consistent environment reliability across production.

Tech Stack: Node.js, TypeScript, NestJS, PostgreSQL, TypeORM, Redis, Docker, JWT, Swagger

School Management Platform

github.com/muhammadaliismoilov/school-erp-crm-lms-bi_backend

A full-scale ERP + CRM + LMS + BI platform built for private schools, currently in active development across two repositories (backend linked below; frontend: github.com/muhammadaliismoilov/school-erp-crm-lms-bi-frontend). Multi-tenant by design — a superadmin layer manages unlimited schools and branches with strict data isolation enforced via AsyncLocalStorage-based tenant scoping. Spans 50+ backend modules: turnstile-integrated attendance with Telegram/push alerts, HR and payroll, finance, admissions, LMS, library, transport, and analytics. Hardened with JWT refresh-token rotation, Argon2id hashing, wildcard RBAC permissions, and 2FA, with Sentry and Prometheus/Grafana observability built in. Architected to scale past 1000 users per school deployment.

Tech Stack: Node.js, TypeScript, NestJS, Next.js, PostgreSQL, TypeORM, Redis, JWT, Docker

LICENSES & CERTIFICATIONS

- Backend Development (Node.js) — Najot Ta'lim, 2025
- JavaScript Algorithms and Data Structures — freeCodeCamp.com, 2025 (freecodecamp.org/certification/aliismoilov/javascript-v9)

EDUCATION

Tashkent Institute of Irrigation and Agricultural Mechanization Engineers National Research University

Bachelor's Degree in Agricultural Mechanization | September 2020 – June 2025

Najot Ta'lim

Backend Development (Node.js) | November 2024 – June 2025
